Get Azure DevOps Field Reference Name

This guide describes how to manually get an Azure DevOps field reference name.
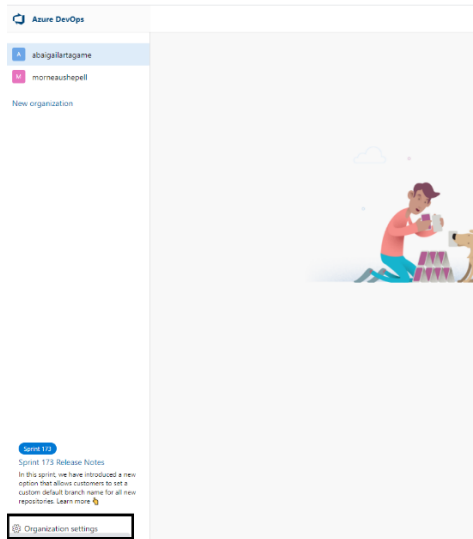

Note: You can also use this [Azure DevOps REST API](#) to get the field reference name.
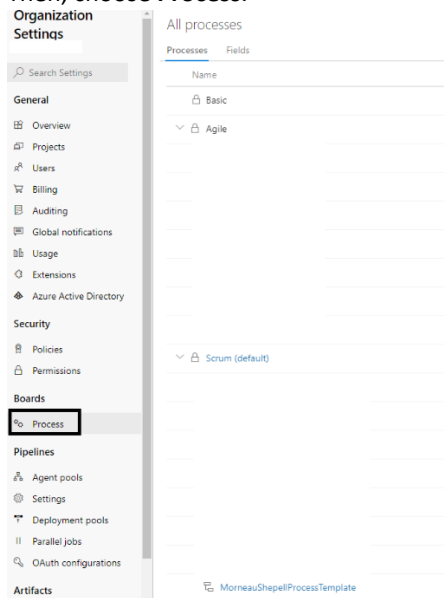

Prerequisites:

1. You must be a member of the Project Collection Administrators group, or have the corresponding permissions Create process, Delete process, Edit process, or Delete a field from organization set to Allow.
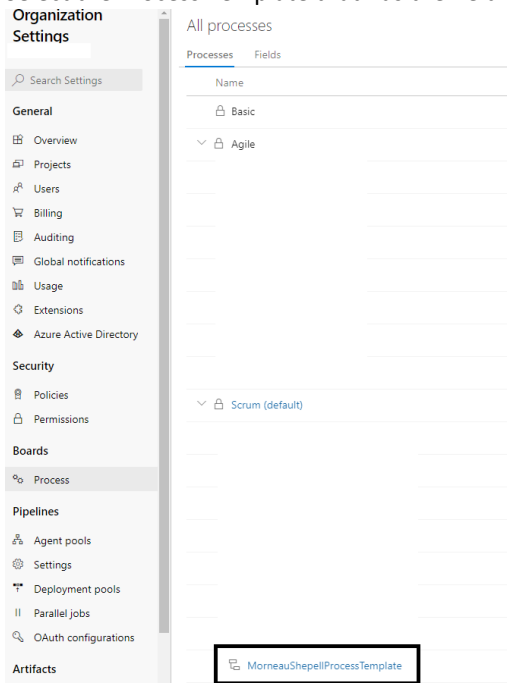

Instructions:

1. Choose the ⬢ Azure DevOps logo to open **Projects**. Then choose Organization **settings**.

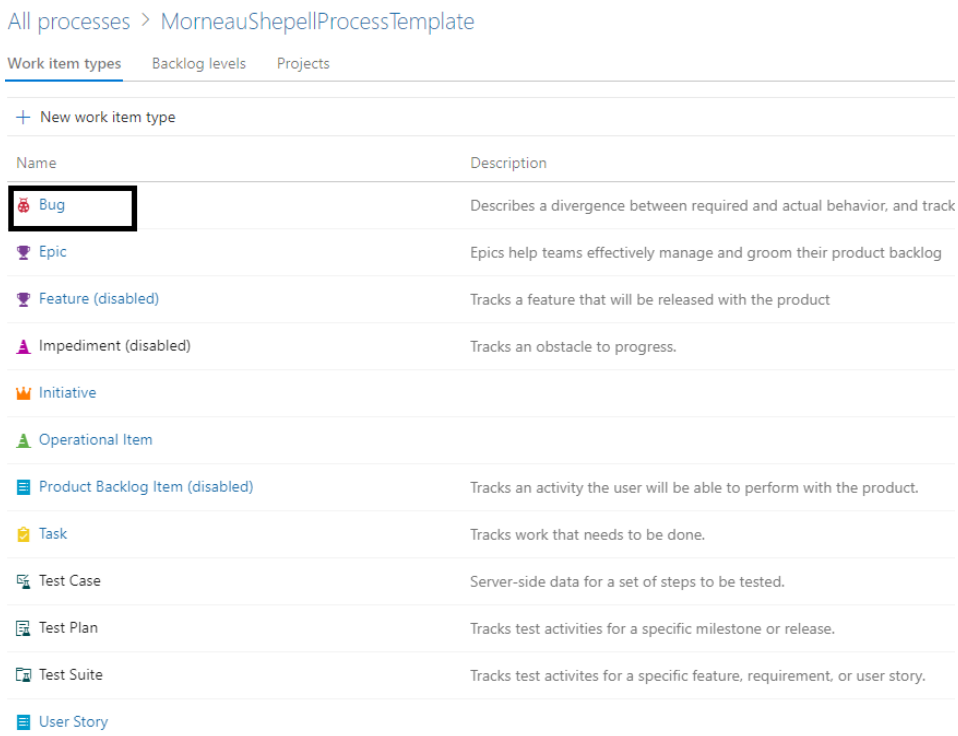

2. Then, choose **Process**.

3. Select the Process Template that has the field that you want to get the reference name.

4. Select the work item type that has the field that you want to get the reference name

5. Go to the page where the field is located. Open the ... context menu and choose the **Edit** option.

6. Select **Options Tab** and you there you will find the field reference name.
